Cart Abandonment Analysis & Recommendations

Presented by: Vikhyat Singh
Customer Analytics Project

Four things we found that matter to your business

01 75.8% abandonment

Customers add items but fail to complete purchase.

02 Biggest leakage point

317 customers leave between cart and checkout.

03 Seasonal patterns exist

March highest risk, November lowest abandonment.

04 Predictive model works

62.3% of abandoners identified correctly.

How we defined abandonment — and why it matters

Abandoned = Added to cart AND did not complete purchase

Browsed-only sessions excluded because no purchase intent was shown.

Who abandons most — and what patterns tell us

Abandonment rate follows a predictable annual pattern

Where customers leave the purchase journey

What predicts whether a customer will abandon?

Increases abandonment

Page load +0.0158
Weekend +0.2298
Page views +0.0191

Reduces abandonment

Entered payment -3.3527
Previous purchases -0.0056

How accurately can we identify abandoners?

Accuracy

62.5%

Precision

68.9%

Recall

62.3%

Recall is the key metric because missed abandoners represent lost recovery opportunities.

Three actions your team can take starting this week

01 Fix checkout experience

Reduce friction at the largest drop-off point.

02 Launch predictive recovery campaigns

Target users based on abandonment probability.

03 Improve data capture

Add shipping, inventory and campaign information.

What would make the analysis stronger

Could not measure:

- Shipping cost effect
- Inventory availability
- Campaign ROI

Next steps:

1. Add missing business variables
2. Run A/B tests
3. Build monitoring dashboard
